

Kit Cool - Microphone boom pole support

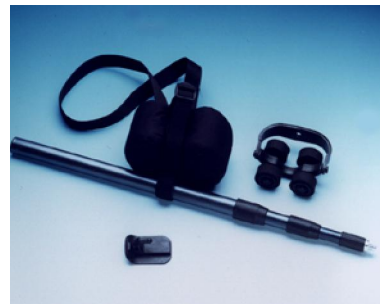

The Kit Cool body support is an important advancement in sound recording for video, film & television. Used in the studio or on location, the Kit Cool supports any size boom pole and allows complete control with only one hand. The Kit Cool distributes the weight of the boom primarily on the belt clip, and stabilizes it from the shoulder harness.

The vertical Kit Cool support pole is variable in height from 1.8 ft to 3.3 ft (0,55m to 1m). That's above waist height, enabling a boom position over a wide camera frame without a ladder! The cradle head has four quiet foam covered rollers on a smooth rocking bridge. The shoulder harness features a durable elastic section to stabilize the pole and together you are free to cue, lift, pan and quietly move the boom pole in any direction with one or two hands. You can even lift the boom off the cradle and replace it easily and quietly.

ENG sound recordists are able to ride gain on their mixers. Novice boom operators are able to hold steady microphone positions. Even experienced operators can relieve strain and avoid injury to arm, neck, shoulder & back muscles.

Kit Cool includes :

- Vertical Support pole (L=0,55~1m)
- mobile cradle head
- élastic strap
- foam cushion
- Belt Clip

(Boom pole and Microphone not included)

**Strong Belt + harness
(optional)**

All specifications are subject to change without notice.
